

Experimental study of the influence of hydrogen as a fuel additive on the formation of soot precursors and particles in atmospheric laminar premixed flames of methane

Hong Quan Do, Luc-Sy Tran, Laurent Gasnot, Xavier Mercier*, Abderrahman El Bakali*

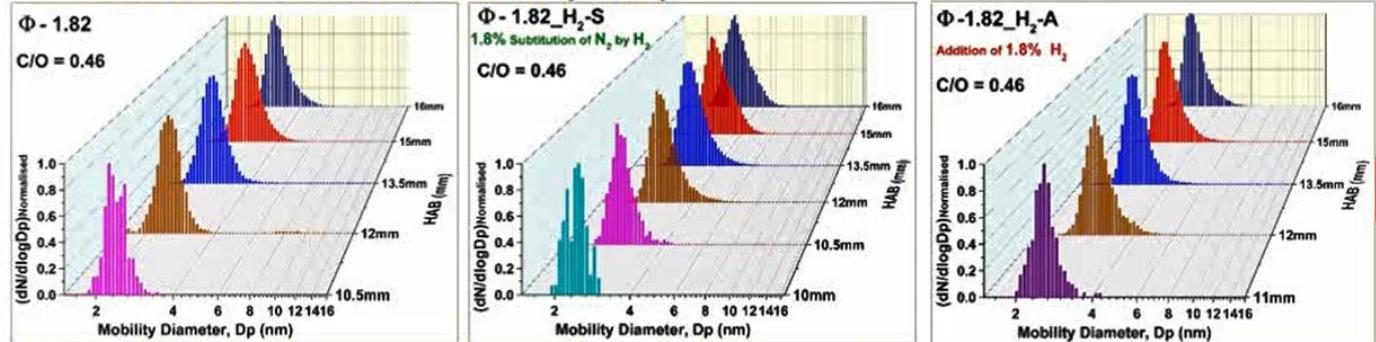

Physicochimie des Processus de Combustion et de l'Atmosphère (PC2A), CNRS UMR 8522, Université de Lille, F-59000 Lille, France

1. Soot formation in premixed flame

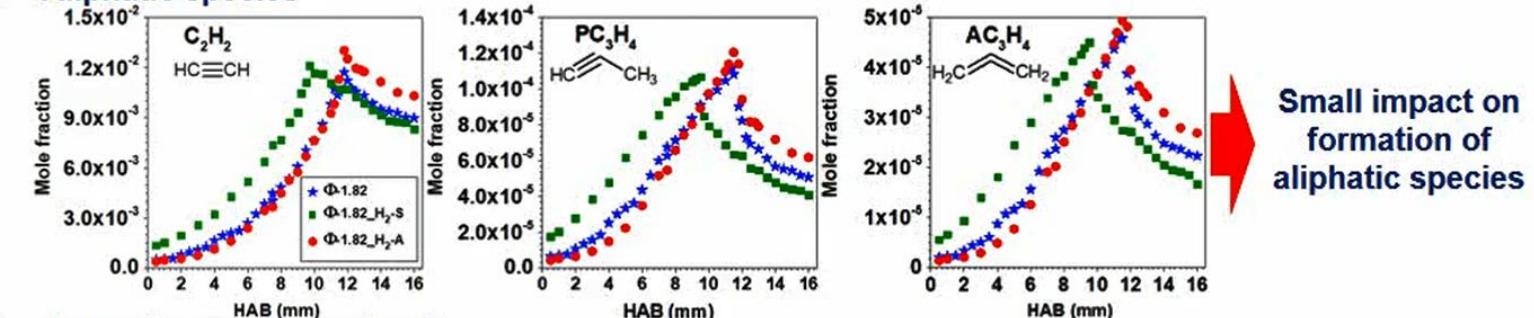

2. Results - Impact of H₂ on soot formation

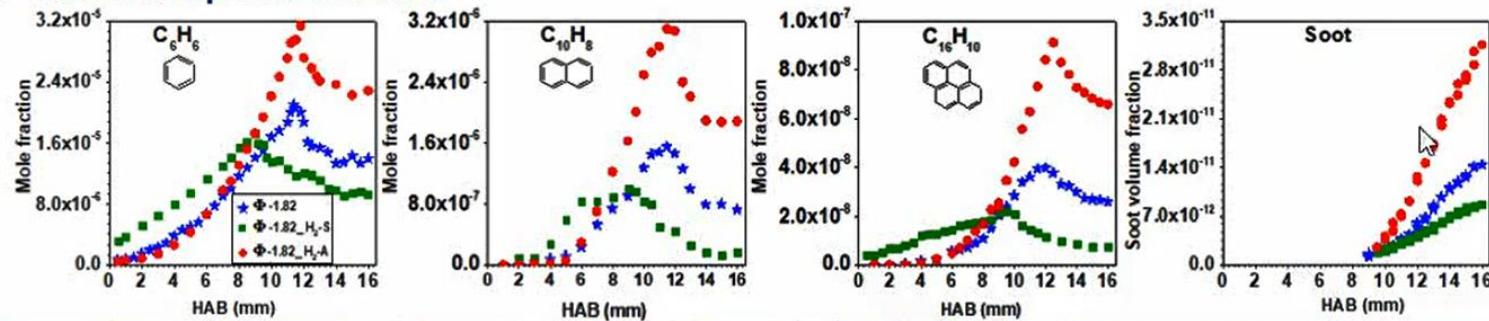

➤ Particle sizer distribution function (PSDF)

➤ Aliphatic species

➤ Aromatic species and soot

Aromatic species and soot formation strongly impacted by H₂ introduction
Change of soot volume fractions profiles essentially depending on aromatic species concentrations

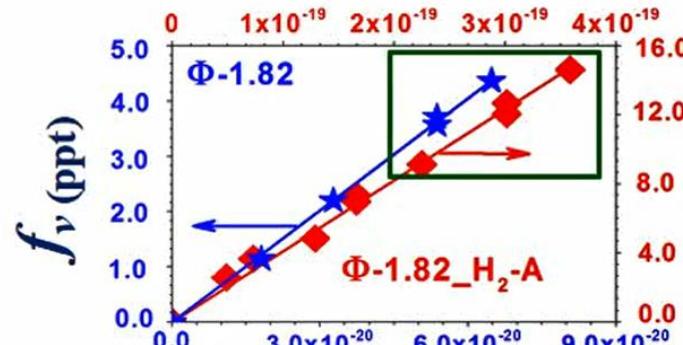

2. Results – Soot nucleation process

➤ Soot nucleation

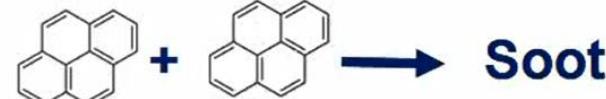

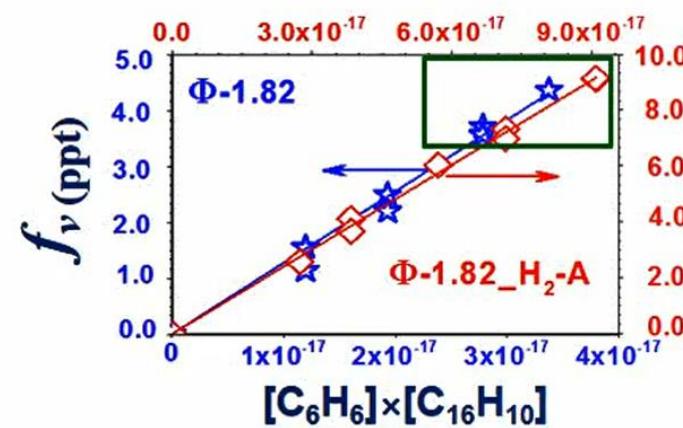

$$f_\nu \sim [\text{PAH}] \times [\text{PAH}]$$

Homogenous dimerization

Heterogeneous dimerization

➤ Pyrene is a good candidate for the soot nucleation process
